*Sandra Henry J*  
CHILD OF PAUL T. HENRY

**Abstract** The purpose of this study was to determine the effect of a 12-week, 100% body weight (BW) resistance training program on the muscle strength and endurance of the lower extremities in healthy young adults. The subjects were divided into two groups: a control group and an exercise group. The control group performed no exercise, while the exercise group performed a 12-week, 100% BW resistance training program. The results showed that the exercise group had significantly greater muscle strength and endurance than the control group at the end of the 12-week program. The findings suggest that a 12-week, 100% BW resistance training program is effective in improving muscle strength and endurance in healthy young adults.
